EDUCATION

Western University

Bachelor of Science, Specialization in Computer Science
GPA: 3.8/4.0

London, ON

Sep. 2023 – Present

CLUB EXPERIENCE

Full-stack Developer at Western Developer's Society

September 2024 - Present

London, ON

- Developed a council management application to automate speaking order, attendance tracking, and voting processes for the Undergraduate Engineering Society, enhancing meeting efficiency
- Collaborated with a team to design and implement a full-stack solution using React Native, Express, Node.js, SQL, and JavaScript
- Contributed to infrastructure management, optimizing server and API performance for seamless mobile and web interactions
- Integrated a dynamic backend with a complete database to ensure secure and efficient handling of attendance, voting data, and speaking order

Back-end Developer at Western Tech for Social Impact

September 2024 - Present

London, ON

- Designed and developed RESTful APIs for a Social Services Accessibility App, enabling seamless access to various social services like food banks, housing assistance, and mental health support
- Integrated third-party APIs for real-time data updates, including service hours, capacity, and emergency alerts, improving the app's ability to serve users in critical need
- Created and maintained database schemas using PostgreSQL to store information on social services, including locations, contact details, and operational hours

PROJECTS

NHL Wordle | *Python, FastAPI, React, PostgreSQL, Javascript, HTML/CSS*

May 2024 – Present

- Developed RESTful APIs using FastAPI to handle NHL player and team data, including integration with external APIs for data retrieval and processing
- Developed a dynamic player data merging system to combine and synchronize player data into a dataset for querying and analysis
- Published a full-stack web application using React as the front-end
- Handled asynchronous data fetching ensuring efficient retrieval of player data

Frog Path | *Java*

January 2024

- Developed and implemented an Abstract Data Type to simulate a frog's path through a pond, incorporating complex movement rules and environmental hazards
- Utilized stacks and priority queues to manage and prioritize frog movements based on cell types, distances, and surrounding conditions
- Applied Object-Oriented Programming principles to design modular and reusable code, creating classes and objects that encapsulate the behavior and attributes of different entities in a simulation environment

TECHNICAL SKILLS

Languages: Python, Java, C, SQL (Postgres), JavaScript, HTML/CSS

Developer Tools: Git, VS Code, PyCharm, IntelliJ, Eclipse, Postman

Libraries: React, Node.js, FastAPI, MongoDB, Numpy, Pandas, Matplotlib
