Experience

Automation Engineer Intern, Royal Bank of Canada (RBC) – Toronto, ON May 2026 – August 2026

- Developed an automated API validation suite covering authentication, third-party eligibility verification, and credit decisioning endpoints for RBC's consumer banking platform, reducing reliance on manual regression testing
- Engineered an AI test generation pipeline integrating MCP server connections to parse Jira user stories, generate test cases, and publish documentation to Confluence, reducing manual QA labour by **70%**
- Extended an enterprise Playwright/TypeScript E2E suite with over **20** critical-path test scenarios encompassing **100+** individual validations across consumer credit card offer flows

Software Developer and QA Intern, Trojan Technologies – London, ON May 2025 – May 2026

- Cut initial hardware testing time by **62%** by developing a C# automation framework integrating Modbus RTU, RS232/RS485, TCP, and MQTT device protocols for product validation
- Built and administered Jenkins CI/CD pipelines on a Windows runner, gating merges on xUnit test runs, linting, and build verification with **81%** coverage tracked through Coverlet
- Automated test environment provisioning through the Proxmox VE API, managing a pool of cloned LXC containers that Jenkins pipelines allocated per build for isolated and parallel execution

Projects

Pokémon Nuzlocke Tracker | Python, FastAPI, React, TypeScript, Supabase, IndexedDB, OAuth nuzlify.com

- Shipped a Nuzlocke tracker to **1,500+** users with **15,000+** page views, where players manage save files and track team, route, and gym progress across main-series games
- Designed JWT session handling for Google OAuth login, including token issuance, refresh rotation, and auth guards on protected routes
- Engineered offline-first functionality using IndexedDB and localStorage, allowing uninterrupted game tracking with automatic sync on reconnect

CareLink | Next.js, React, Tailwind CSS, IndexedDB, CouchDB, Groq API [DevPost](#)

- Built an offline-first progressive web app to track patient referrals in rural clinics with unreliable connectivity, earning **2nd place** at the Spark 2026 Hackathon competing against 47 other teams
- Implemented local-first data storage in IndexedDB with automatic CouchDB synchronization to enable full offline use and multi-device syncing
- Integrated LLaMA 4 Vision via Groq API to extract structured patient data from photographed referrals using optical character recognition (OCR)

Education

Western University – London, ON Expected April 2028
Bachelor's of Science, Honours Specialization in Computer Science GPA: 3.70 / 4.00
Dean's Honour List 2023–2024, 2024–2025

Skills

Languages: Python, TypeScript, JavaScript, React, Java, C#, C, C++, SQL, HTML, CSS

Backend and Databases: Node.js, FastAPI, Flask, PostgreSQL, MongoDB, Supabase

Frameworks and Libraries: React, Next.js, Playwright, Selenium, xUnit, JUnit, Pandas, NumPy, Scikit-learn, Matplotlib, BeautifulSoup, shadcn/ui

Tools and Platforms: Git, Docker, Kubernetes, IntelliJ, VSCode, Jenkins, Azure, AWS S3, Google Cloud, Postman, Jira, Confluence, Power BI, Vercel, Claude Code, Codex, MS Office
